

Mama na Mtoto

Key Discussion Findings

Perception of Increased Visits to Health Facilities

"... we have seen increased number of clients coming to our health facilities ... mothers under 12 weeks ... the existing of CHWs has contributed to an increase in the number of clients, they visit to the community and direct the clients, and they come in the health facility ..."
[Government Interview (CHMT Member)]

"... they should expect that the project will improve health service in their area including the skills of the health providers ... capacity building and mentorship from the project has a benefit to the staff. But more than that, is to the community in general ... it helps them to get health education from the hamlet level ... help to link the community and the health providers ... link health providers and make sure the health services are provided well ... better techniques to implement health services in their areas."
[CHW Supervisor Focus Group]

Capacity Building within Communities

Perceived Sustainability within Communities

"This activity will be sustained because every one of us, through CHWs, we have learned ... the way we have been taught for example, in my family I am already a teacher to my generations, when my child grow up I will direct her on how to care about the pregnant ... they will continue in the future generation even when this project come to an end, we as mothers will already have the knowledge so it will not be much problem, we will be benefitting."
[Mothers Focus Group]

"... I was not aware on health education that I supposed to attend clinic with my wife, so I thought it was for her to go and come back or attend clinic alone. After education I am aware that I have a chance to go and listen to the health expertise while educating on the reproductive health and child care sessions ... thank you ... there are so many thing we are educated, reproductive health, how to upbringing children ... so I am enjoying."
